SnakeID

A classic-snake-themed NFT collection, the SNAKE token, and a launchpad for the next collections. One brand, one team, and rules anyone can check directly in the contracts.

BLOCKCHAIN	NFT SUPPLY	MINT STATUS	TOKEN
BNB Chain	**10,000**	**Sold out**	**SNAKE**

Summary: volume first, promises later

SnakeID is a collection of 10,000 NFTs themed on the snake and the classic Nokia game. Mint opened on 31 October 2026 and the supply sold out. Once minting finished, the project's focus shifted to volume: the SNAKE token claim and presale must run to completion, and the secondary market must stay active.

This whitepaper explains the three connected parts of the project. First, the SnakeID NFT as a collectible asset and a claim requirement. Second, the SNAKE token, with a fixed supply of 1 billion, no tax, and no blacklist, pause, or owner power that can change the token rules. Third, the Snake Launchpad, where other collections can launch with minting via an agent, without connecting a wallet on the site.

> **Understand this from the start.** Only 194,790,000 SNAKE is actually allocated for claims to 9,477 wallets. The figure of 600,000,000 SNAKE is the fund deposited into the claim contract, not the claim allocation. The unallocated and unclaimed remainder of the claim fund goes to liquidity after the claim deadline, not to the team. The full explanation is in Chapters 3 and 4.

This document was prepared on 2 November 2026 from contracts already deployed and verified, and from the project's status on that date. Status figures can change; the contract addresses and the on-chain rules are the authoritative reference.

CHAPTER 1

The NFT collection: 10,000 snakes, five traits, locked rarity

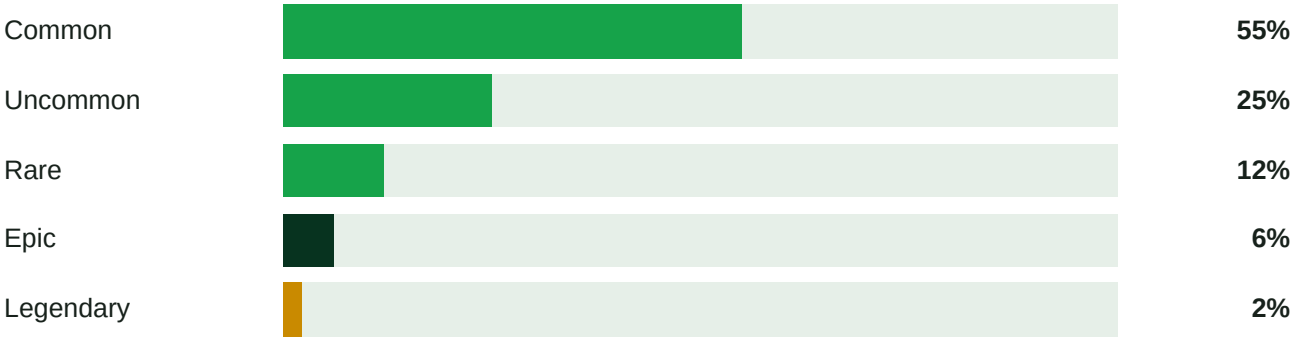

Each SnakeID token is formed from five trait categories: shape, body color, pattern, background, and the rarity tier derived from that combination. The combinations are weighted by design, so some traits appear in only a small share of the supply.

Trait category	Number of values	Notes
Shape	12	Includes spiral and coil, both rare.
Body color	12	Includes magenta, the rarest color in this category.
Pattern	3	Includes stripe.
Background	8	Includes the gold and black backgrounds.
Rarity tier	5	Common, Uncommon, Rare, Epic, Legendary.

Locked rare traits

- **Spiral:** 0.5% of the supply.
- **Coil:** 1.5% of the supply.
- **Magenta:** 1% of the supply.
- **Gold background:** 3% of the supply.

Rarity tier split

A real example of this split is the first token minted by the team: SnakeID #1121, wavy shape, blue color, stripe pattern, black background, Uncommon tier. The rarity list for all 10,000 tokens is published as `rarity.json` and the market uses it to show a rarity badge on every listing.

The project site is at snakeid.xyz. The project's official X account is @snakeidbnb. The NFT metadata is served from `https://snakeid.xyz/metadata/`.

CHAPTER 2

Mint and marketplace: free for Agent ID holders, market opens at sold out

SnakeID mint opened on 31 October 2026 at 10:42 WIB. The rules are simple and apply equally to every wallet, with no limit on the number of paid mints per wallet.

Mint rules	Terms
Free mint	1 free token per Agent ID holder wallet.
Paid mint	About 0.0014 BNB per token, equal to about 1 US dollar when the rule was locked. No limit per wallet.
Supply	10,000 tokens. Minting closes automatically when the supply runs out.

The SnakeID marketplace

The marketplace uses its own market contract with a 5% fee and a minimum listing price of 0.001 BNB. During the mint period, the market was locked on the website side; it opens automatically only when total mints reach 10,000, the same trigger as sold-out status. The aim is for secondary trading not to run before the whole supply has finished minting.

Since 2 November 2026, the market on the Snake site has become a single marketplace for more than one collection. SnakeID and Agent Panda appear in separate tabs, each with its own statistics and activity feed. There is no combined view that mixes the two collections' figures. Every SnakeID listing card shows a rarity badge and can be filtered by rarity, following community feedback.

> **Market data as of 2 November 2026.** Within the SnakeID scope, 117 sales were recorded with a volume of 0.117 BNB. This is a record of market activity on that date and will change as trading continues. Check the latest figures on the market page before making any decision.

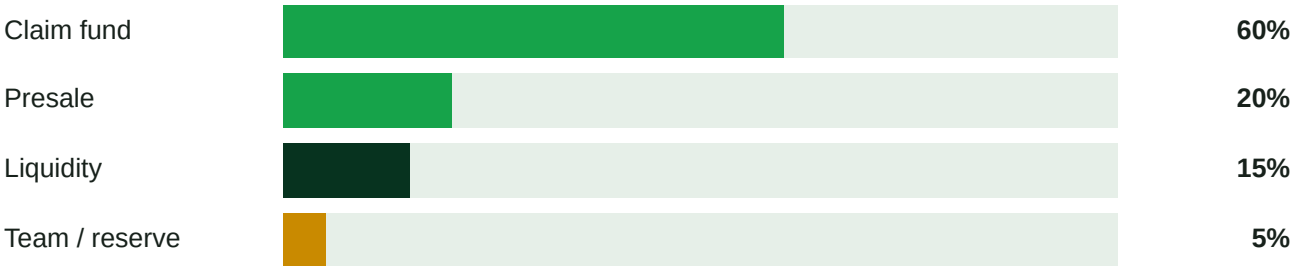

All trading actions on the site are done without connecting a wallet. Users copy a prompt and complete it through their agent, then verify the transaction on the blockchain before and after execution.

CHAPTER 3

The SNAKE token: fixed 1 billion supply, no tax, no owner power

SNAKE is a token with a fixed supply of 1,000,000,000 and 18 decimals. There is no transfer tax, no blacklist, no pause, and no owner power that can change the token rules after deployment. Its supply split is locked as follows.

Allocation	Amount of SNAKE	Share
Claim fund	600,000,000	60%
Presale	200,000,000	20%
Liquidity	150,000,000	15%
Team / reserve	50,000,000	5%
Total	**1,000,000,000**	**100%**

> **Read this table correctly.** A claim fund of 600,000,000 SNAKE does not mean 600,000,000 SNAKE is distributed through claims. From that fund, the actual claim allocation is only **194,790,000 SNAKE for 9,477 wallets**. The remainder, **405,210,000 SNAKE**, is not allocated to claims and goes to liquidity after the claim deadline. SNAKE that was allocated but not claimed by the deadline also goes to liquidity. The claim page shows only the actual allocation, 194,790,000 SNAKE, and never presents 600,000,000 SNAKE as the allocation.

The contracts were funded on 31 October 2026: 600,000,000 SNAKE to the claim contract, 200,000,000 SNAKE to the presale contract, and the remaining 200,000,000 SNAKE to the owner wallet, covering 150,000,000 SNAKE for liquidity and 50,000,000 SNAKE for the team or reserve.

CHAPTER 4

Claiming: 10,000 SNAKE per NFT, verified by Merkle proof

SNAKE claims use a Merkle list (Merkle tree). Only wallets on the list that have never claimed can claim, and every claim is verified with a Merkle proof in the contract. The final combined list holds 9,477 wallets with a total allocation of 194,790,000 SNAKE, and its root has been set in the contract and verified on-chain.

Claim rules	Terms
Per SnakeID NFT	10,000 SNAKE per NFT held.
Agent ID bonus	An extra 10,000 SNAKE per wallet, only for Agent ID holders holding at least 1 SnakeID NFT.
Limit	One claim per wallet in this claim period.
Deadline	30 November 2026, 22:21 WIB.

The active Merkle root: `0x7d499074d61f89eaa2362ed8bde0d7ea2c4456cd422222dc4f2e3803ab66ea7d`

There is no second-round snapshot. The direction in force is claiming from the fixed list, first come first served within the allocation, until the full 194,790,000 SNAKE allocation is claimed. A live-check claim version that checks NFT and Agent ID ownership directly on-chain has been built and tested but is not yet deployed; the live claim uses the Merkle contract already in production.

CHAPTER 5

Presale: fixed price, 2 BNB hard cap, BNB locked until it ends

The presale uses a dedicated contract and opened together with the claim on 31 October 2026 at 20:43 WIB, for 7 days until 7 November 2026 at 20:43 WIB.

Presale rules	Terms
Price	100,000,000 SNAKE per 1 BNB.
Hard cap	2 BNB.
Per-wallet limit	Minimum 0.001 BNB, maximum 0.5 BNB.
Token delivery	SNAKE is sent immediately on purchase.
BNB raised	Stays in the contract until the sale ends; unsold SNAKE goes to liquidity.

On 31 October 2026 at 22:22 WIB, the presale had recorded 0.101 BNB raised with 10,100,000 SNAKE sold. Presale BNB cannot be withdrawn early: the withdrawal function in the contract can only run after the sale ends or the hard cap is reached, and the contract has no early-end function.

CHAPTERS 6 AND 7

Liquidity: the pool opens after the presale, the opening price is calculated from the locked figures

SNAKE had no pool when this whitepaper was prepared, and that is normal for a token whose pool only opens after the presale ends. The liquidity plan is as follows.

- **150,000,000 SNAKE** is set aside for liquidity on PancakeSwap, paired with the BNB raised in the presale.
- If the presale reaches the 2 BNB hard cap, the opening pool is formed from 150,000,000 SNAKE + 2 BNB, that is 75,000,000 SNAKE per BNB. That figure is 33% above the presale price, and is calculated as fair-launch mathematics, not a price promise.
- The LP tokens are planned to be locked for 50 years. The locking mechanism is still to be decided when liquidity is added and must cost nothing besides gas.
- Unallocated and unclaimed SNAKE from the claim fund goes to liquidity after the claim deadline of 30 November 2026.

> **No price promise.** The figures above explain how the opening pool is calculated from the locked amounts. The price after the pool opens is set by market trading and can fall below the presale price. Do not read this whitepaper as a promise of profit.

Snake Launchpad: one Snake brand, other collections launch here

The Snake Launchpad is at snakeid.xyz/launchpad. The launchpad is a service other collections use to launch, not a collaboration between two teams. There is only one brand: Snake. Its title is Snake Launchpad and its team is called the Snake team. Other collection names are mentioned only as collection names, not as part of the brand.

Launchpad terms: curation by the Snake team, minting via agent only, and no wallet connect on the site. The first collection live on the launchpad is Agent Panda, a gold panda card collection with a supply of 10,000 tokens. On 2 November 2026 at 15:08 WIB, Agent Panda had recorded 549 of 10,000 tokens minted, and its mint was open.

The same standard applies to every project joining in the future: a live, real-time activity feed like Snake's, its own per-collection statistics, and its own trading prompts. No joining project gets a combined view that mixes its figures with another collection's.

CHAPTER 8

Status, contracts, and verification

All main SnakeID and SNAKE contracts are verified on Sourcify with exact match status. Verification means the published source code matches the deployed bytecode exactly, so anyone can read and check the contract rules.

Contract	Address (BNB Chain)
SnakeID NFT	`0xafc6bca0e191e396306343213b04ff9a8d717263`
SnakeID Market	`0x0a5e8d61230241312a623e17d61540d0dff2feb7`
SNAKE token	`0x3396Fc5052e0EB56363a70C6AeedA3446FA7FaDe`
MerkleClaim	`0x99e0a14e53993a1eeb253e5451d40113d58a6a59`
SnakePresale	`0x9b483d06b8132d2076bd7c727a61182e6530fc90`
Snake owner wallet	`0x11b38f8854060515cd93f03f3f198ea675ad9c91`

Timeline so far

Date	Event
30 Oct 2026	The SnakeID NFT and market were deployed and Sourcify-verified. The snakeid.xyz domain was registered.
31 Oct 2026	Mint opened at 10:42 WIB and sold out. The SNAKE token, claim, and presale were deployed, funded, and opened at 20:43 WIB.
1 Nov 2026	The CoinMarketCap form was submitted (ticket 1470746). A submission is not approval.
2 Nov 2026	Snake Launchpad live with Agent Panda as the first collection; the multi-collection market with rarity badges and separate tabs live.

Still running or unfinished

- **Claim** until 30 November 2026, 22:21 WIB. The remaining claim fund goes to liquidity after the deadline.
- **Presale** until 7 November 2026, 20:43 WIB. BNB can only be withdrawn after the sale ends.
- **PancakeSwap liquidity** opens after the presale; the 50-year LP lock mechanism is still to be decided when liquidity is added.
- **Token logo** on Trust Wallet still in progress; no payment was made for that process.
- **Live-check claim** built and tested, not yet deployed.

CHAPTER 9

Risks and how to participate safely

SnakeID and SNAKE are a small community-built crypto project. Reading the risks below is part of the whitepaper, not a footnote.

Risks to understand

- **The price can fall.** SNAKE has no pool yet and no market price until the pool opens. After the pool opens, the price is set by trading and can sit below the presale price.
- **Opening liquidity is small.** The opening pool is formed from the amounts explained in Chapter 6. Small liquidity means the price can move sharply on relatively small transactions.
- **Contracts cannot be changed at will.** That also means errors or limits already in a contract, such as presale BNB being locked until the sale ends, cannot be fixed by a unilateral decision.
- **Dependence on third parties.** A CoinMarketCap listing, logo display in wallets, and free RPC services are outside the team's control and can be delayed or fail.
- **Scams impersonating the project.** Only use the contract addresses and sites listed in this whitepaper. The team never asks for a seed phrase or private key in any form.

How to participate

1. Check whether your wallet is on the claim list and what your allocation is on the claim page, snakeid.xyz.
2. Verify the contract addresses on the blockchain before sending any transaction.
3. For minting and trading, use a prompt through your agent; do not connect your wallet to a site you do not recognize.
4. Keep proof of your transactions and check their status in the BNB Chain explorer.
